High-School Biology Today and Tomorrow National Research Council 1989-02-01 Biology is where many of science's most exciting and relevant advances are taking place. Yet, many students leave school without having learned basic biology principles, and few are excited enough to continue in the sciences. Why is biology education failing? How can reform be accomplished? This book presents information and expert views from curriculum developers, teachers, and others, offering suggestions about major issues in biology education: what should we teach in biology and how should it be taught? How can we measure results? How should teachers be educated and certified? What obstacles are blocking reform?

Forms of Ethical and Intellectual Development in the College Years William G. Perry, Jr. 1998-11-02 Since its original publication in 1970, this landmark book by William Perry has remained the cornerstone of much of the student development research that followed. Using research conducted with Harvard undergraduates over a fifteen-year period, Perry derived an Anduring framework for characterizing student development—a scheme so accurate that it still informs and advances investigations into student development across gAnders and cultures. Drawing from firsthand accounts, Perry traces a path from students' adolescence into adulthood. His nine-stage model describes the steps that move students from a simplistic, categorical view of knowledge to a more complex, contextual view of the world and of themselves. Throughout this journey of cognitive development, Perry reveals that the most significant changes occur in forms in which people perceive their world rather than in the particulars of their attitudes and concerns. He shows ultimately that the nature of intellectual development is such that we should pay as much attention to the processes we use as to the content. In a new introduction to this classic work, Lee Knefelkamp—a close colleague of Perry's and a leading expert on college student development—evaluates the book's place in the literature of higher education. Knefelkamp explains how the Perry scheme has shaped current thinking about student development and discusses the most significant research that has since evolved from Perry's groundbreaking effort. *Forms of Ethical and Intellectual Development in the College Years* is a work that every current and future student services professional must have in their library.

Principles of Modern Biology Douglas Marsland 1957

The War of the Worlds H. G. Wells 2017-01-01 When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature.

Text Analysis for the Social Sciences Carl W. Roberts 2020-07-25 This book provides descriptions and illustrations of cutting-edge text analysis methods for communication and marketing research; cultural, historical-comparative, and event analysis; curriculum evaluation; psychological diagnosis; language development research; and for any research in which statistical inferences are drawn from samples of texts. Although the book is accessible to readers having no experience with content analysis, the text analysis expert will find substantial new material in its pages. In particular,

this collection describes developments in semantic and network text analysis methodologies that heretofore have been accessible only among a smattering of methodology journals. The book's international and cross-disciplinary content illustrates the breadth of quantitative text analysis applications. These applications demonstrate the methods' utility for international research, as well as for practitioners from the fields of sociology, political science, journalism/communication, computer science, marketing, education, and English. This is an "ecumenical" collection that contains applications not only of the most recent semantic and network text analysis methods, but also of the more traditional thematic method of text analysis. In fact, it is originally with this volume that these two "relational" approaches to text analysis are defined and contrasted with more traditional "thematic" text analysis methods. The emphasis here is on application. The book's chapters provide guidance regarding the sorts of inferences that each method affords, and up-to-date descriptions of the human and technological resources required to apply the methods. Its purpose is as a resource for making quantitative text analysis methods more accessible to social science researchers.

The Argument Builder Shelly Johnson 2008-05-01 Have you ever wanted to prove a point but you didn't know how to do it? Have you ever been stuck in an argument in which your opponent makes several strong points but you don't know what to say? If so, this is just the book for you! The Argument Builder is the ideal companion to *The Art of Argument* for students in eighth grade and up, as well as many curious adults! The Argument Builder trains students to build their own sound and persuasive arguments. Written in a conversational, humorous, and easy to understand style, the text is a blend of logic and rhetoric-students first study the logical structure of good arguments and then study how to use several lines of argument (a.k.a., the common topics, first invented by Aristotle) including examples, analogy, comparison, testimony, and statistics, and layer them together into a strong whole. The text comes in a workbook format with many everyday examples, funny illustrations, and plenty of exercises to ensure students learn to become skilled argument makers!
