The Foundations and Future of Financial Regulation Mads Andenas 2013-11-20 Financial regulation has entered into a new era, as many foundational economic theories and policies supporting the existing infrastructure have been and are being questioned following the financial crisis. Goodhart et al's seminal monograph "Financial Regulation: Why, How and Where Now?" (Routledge:1998) took stock of the extent of financial innovation and the maturity of the financial services industry at that time, and mapped out a new regulatory roadmap. This book offers a timely exploration of the "Why, How and Where Now" of financial regulation in the aftermath of the crisis in order to map out the future trajectory of financial regulation in an age where financial stability is being emphasised as a key regulatory objective. The book is split into four sections: the objectives and regulatory landscape of financial regulation; the regulatory regime for investor protection; the regulatory regime for financial institutional safety and soundness; and macro-prudential regulation. The discussion ranges from theoretical and policy perspectives to comprehensive and critical consideration of financial regulation in the specifics. The focus of the book is on the substantive regulation of the UK and the EU, as critical examination is made of the unravelling and the future of financial regulation with comparative insights offered where relevant especially from the US. Running throughout the book is consideration of the relationship between financial regulation, financial stability and the responsibility of various actors in governance. This book offers an important contribution to continuing reflections on the role of financial regulation, market discipline and corporate responsibility in the financial sector, and upon the roles of regulatory authorities, markets and firms in ensuring the financial health and security of all in the future.

Handbook on the Economics of Leisure Samuel Cameron 2011-01-01 This interdisciplinary Handbook combines both mainstream and heterodox economics to assess the nature, scope and importance of leisure activities. Surprisingly, the field of leisure economics is not, thus far, a particularly integrated or coherent one. In this Handbook a wide ranging body of international scholars get to grips with the core issues, taking in the traditional income/leisure choice model of textbook microeconomics and Becker's allocation of time model along the way. They expertly apply economics to some usually neglected topics, such as boredom and sleeping, work/life balance, dating, tourism, health and fitness, sport, video games, social networking, music festivals and sex. Contributions from further afield by Veblen, Sctivosky and Bourdieu also feature prominently. Applying a mix of both theoretical and empirical data, undergraduate students in modules on sport/leisure economics as well as sport/leisure management will find this important resource invaluable.

The Global Architecture of Multilateral Development Banks Adrian Robert Bazbauers 2021-03-12 This book explores the evolution of the 30 functioning multilateral development banks (MDBs). MDBs have their roots in the growing system of international finance and multilateral cooperation, with the first recognisable MDB being proposed by Latin America in financial cooperation with the US in the late 1930s. That Inter-American Bank did not eventuate but was a precursor to the World Bank being negotiated at Bretton Woods in 1944. Since then, a complex network of regional, sub-regional, and specialised development banks has progressively emerged across the globe, including two significant recent entrants established by China and the BRICS. MDBs arrange loans, credits, and guarantees for investment in member states, generally with the stated aim of fostering economic growth. They operate in both the Global North and South, though there are more MDBs focusing on emerging and developing states. While the World Bank and some of the larger regional banks have been scrutinised, little attention has been paid to the smaller banks or the overall system. This book provides the first study of all 30 MDBs and it evaluates their interrelationships. It analyses the emergence of the MDBs in relation to geopolitics, development paradigms and debt. It includes sections on each of the banks as well as on how MDBs have approached the key sectors of infrastructure, human development, and climate. This book will be of particular interest to researchers of development finance, global governance, and international political economy.

The Intellectual Property Holding Company Jeffrey A. Maine 2017-12-07 Many companies that have become household names have avoided billions in taxes by 'parking' their valuable intellectual property assets in holding companies located in tax-favored jurisdictions. In the United States, for example, many domestic companies have moved their IP to tax-favored states such as Delaware or Nevada, while multinational companies have done the same by setting up foreign subsidiaries in Ireland, Singapore, Switzerland, and the Netherlands. In this illuminating work, tax scholar Jeffrey A. Maine teams up with IP expert Xuan-Thao Nguyen to explain how the use of these IP holding companies has become economically unjustified and socially unacceptable, and how numerous calls for change have been made. This book should be read by anyone interested in how corporations - including Gore-Tex, Victoria's Secret, Sherwin-Williams, Toys-R-Us, Apple, Microsoft, and Uber - have avoided tax liability with IP holding companies and how different constituencies are working to stop them.

In Cold Blood Truman Capote 2013-02-19 Selected by the Modern Library as one of the 100 best nonfiction books of all time From the Modern Library's new set of beautifully repackaged hardcover classics by Truman Capote also available are Breakfast at Tiffany's and Other Voices, Other Rooms (in one volume), Portraits and Observations, and The Complete Stories Truman Capote's masterpiece, In Cold Blood, created a sensation when it was first published, serially, in The New Yorker in 1965. The intensively researched, atmospheric narrative of the lives of the Clutter family of Holcomb, Kansas, and of the two men, Richard Eugene Hickock and Perry Edward Smith, who brutally killed them on the night of November 15, 1959, is the seminal work of the new journalism. Perry Smith is one of the great dark characters of American literature, full of contradictory emotions. "I thought he was a very nice gentleman," he says of Herb Clutter. "Soft-spoken. I thought so right up to the moment I cut his throat." Told in chapters that alternate between the Clutter household and the approach of Smith and Hickock in their black Chevrolet, then between the investigation of the case and the killers' flight, Capote's account is so detailed that the reader comes to feel almost like a participant in the events.

China's Cotton Industry Björn Alpermann 2010-04-05 The cotton processing industry is a distinct sector of China's rural economy which recently underwent a momentous transition from plan to market. China is the world's largest producer as well as consumer of cotton, and cotton processing links the agricultural production of this important commodity to China's booming textile industry. Alpermann examines the political economy of the cotton processing industry, analyzes the process of cotton policy making and discusses reform outcomes on a national scale and the central state's response. He then goes on to examine the implementation of economic transformation and institutional change in two traditional cotton-growing regions, looking at how local governments and the former monopolist cope with the changes brought about by marketization. Studying the cotton industry provides a lens through which to observe the changes in the way the state governs the economy during China's transition and helps to assess the diverging claims about the nature of the political economy in China. As such China's Cotton Industry is an essential read for anyone studying Chinese business, economics or politics.

Banking Reform Great Britain. Treasury 2012-06-14 This white paper sets out the Coalition Government's proposals for taking forward implementation of the recommendations of the Independent Commission on Banking (ICB), chaired by Sir John Vickers (see ISBN 9780108510984). The ICB recommended a package of measures, consisting of: (i) Ring-fencing vital banking services; (ii) Increasing banks' loss-absorbency; (iii) Enhancing competition in the banking sector. This paper aims to clarify how the Government will implement these proposals, so that UK banks are sufficiently resilient to withstand excessive financial shocks, and sufficiently resolvable so as to fail safely without drawing on taxpayer support. The publication is divided into four chapters, with one annex. Chapter 1: Context of these reforms; Chapter 2: Ring-fencing; Chapter 3: Loss-absorbency; Chapter 4: Competition.

Making Banks Safer Mr. Julian T. S. Chow 2011-10-01 This paper assesses proposals to redefine the scope of activities of systemically important financial institutions. Alongside reform of prudential regulation and oversight, these have been offered as solutions to the too-important-to-fail problem. It is argued that while the more radical of these proposals such as narrow utility banking do not adequately address key policy objectives, two concrete policy measures - the Volcker Rule in the United States and retail ring-fencing in the United Kingdom - are more promising while still entailing significant implementation challenges. A risk factor common to all the measures is the potential for activities identified as too risky for retail banks to migrate to the unregulated parts of the financial system. Since this could lead to accumulation of systemic risk if left unchecked, it appears unlikely that any structural engineering will lessen the policing burden on prudential authorities and on the banks.
