Criminological Theories Ronald L. Akers 2013-07-04 In *Criminological Theories*, the noted criminologist Ronald Akers provides thorough description, discussion, and appraisal of the leading theories of crime/delinquent behavior and law/criminal justice - the origin and history of each theory and its contemporary developments and adherents. Akers offers a clear explanation of each theory (the central concepts and hypotheses of each theory as well as critical criteria for evaluating each theory in terms of its empirical validity). Researchers and librarians, as well as general readers, will find this book a very useful tool and will applaud its clear and understandable exposition of abstract concepts.

Parenting Matters National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Reinforcement Learning, second edition Richard S. Sutton 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In *Reinforcement Learning*, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses

the future societal impacts of reinforcement learning.

Student Study Guide and Solutions Manual for Brown/Iverson/Anslyn/Foote's Organic Chemistry, 8th Edition Brent L. Iverson 2017-06-02 The best way for students to learn organic chemistry concepts is to work relevant and interesting problems on a daily basis. Authored by Brent and Sheila Iverson, The University of Texas at Austin, this comprehensive manual offers detailed solutions to all in-text and end-of-chapter problems in the Eighth Edition of the core text. It helps students achieve a deeper intuitive understanding of the material through constant reinforcement and practice--ultimately resulting in much better preparation for in-class quizzes and tests, as well as for national standardized tests such as the DAT and MCAT.

Psychology, Study Guide Drew Westen 1999-01-20 High level introductory psychology book with an attention to both the biological basis of psychology and the role of culture in shaping basic biological processes. Theories are provided in a conceptual framework that captures the excitement and tensions of the field. The book takes a micro to macro focus - from biology and neuroscience to culture. It demonstrates the integration between thoughts, feelings, motivations, social behavior, etc. Revised to include up-to-date research and a more balanced coverage with four new perspectives - psychodynamics, behavioral, cognitive, and evolutionary - introduced in depth to allow readers to begin conceptualizing psychological data.

Understanding Genetics Genetic Alliance 2009 The purpose of this manual is to provide an educational genetics resource for individuals, families, and health professionals in the New York - Mid-Atlantic region and increase awareness of specialty care in genetics. The manual begins with a basic introduction to genetics concepts, followed by a description of the different types and applications of genetic tests. It also provides information about diagnosis of genetic disease, family history, newborn screening, and genetic counseling. Resources are included to assist in patient care, patient and professional education, and identification of specialty genetics services within the New York - Mid-Atlantic region. At the end of each section, a list of references is provided for additional information. Appendices can be copied for reference and offered to patients. These take-home resources are critical to helping both providers and patients understand some of the basic concepts and applications of genetics and genomics.
