Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

One Percent of You Michelle Gross 2019-05-02 Make no mistakes about it. I know what I look like to others. Young, government-aided, pregnant mom. They see Lucy on my hip, and they see a mistake. I mean, why else would someone have a child so young, right? They couldn't be more wrong. I'm too busy most days between parenting, work, and finishing up my last year of nursing school to let their judging gaze tear me down until he moves into the vacant house next to the apartments I live in. His cold, blunt observation of us doesn't differ from any other stranger. He doesn't know me, but he's already painting a picture of who he thinks I am in his mind. He judges my very round belly, Lucy's inability to leave him alone, the bags under my eyes, and the fact that I couldn't care less what I look like anymore. He's a rude guy. Stays that way for months too. Then something happens, I'm not even sure what.

Judgmental Guy decides Lucy and me-as well as baby Eli, are worth his friendship. Turns out, Judgmental Guy isn't too mean-okay, he kind of still is. But he graduates to Elijah. I build an unlikely friendship with him which deems it necessary for him to start smiling around me and my kids. I'm wrong again. Elijah isn't rude. He's terrifying. His strange acts of kindness are unraveling me. Elijah is only my friend. Right? Oh, fudge. I think I'm wrong. Again.

The American and Japanese Auto Industries in Transition Robert E. Cole 1984 This report was prepared for the Policy Board by the U.S. and Japanese research staffs of the Joint U.S.-Japan Automotive Study under the general direction of Professors Paul W. McCracken and Keichi Oshima, with research operations organized and coordinated by Robert E. Cole on the U.S. side, in close communication with the Taizo Yakushiji on the Japanese side. [preface] In view of the importance of stable, long-term economic relationships between Japan and the United States, automotive issues have to be dealt with in ways consistent with the joint prosperity of both countries. Furthermore, the current economic friction has the potential to adversely affect future political relationships. Indeed, under conditions of

economic stagnation, major economic issues inevitably become political issues. With these considerations in mind, the Joint U.S.-Japan Automotive Study project was started in September 1981 to determine the conditions that will allow for the prosperous coexistence of the respective automobile industries. During this two-year study, we have identified four driving forces that will play a major role in determining the future course of the automotive industry of both countries. These are: (1) consumers' demands and aspirations vis-à-vis automobiles; (2) flexible manufacturing systems (FMS); (3) rapidly evolving technology; and (4) the internationalization of the automotive industry.
