Walker Evans John T. Hill 2015-10 This resplendent volume is the most comprehensive study of Walker Evans's work ever published, containing masterful images accompanied by authoritative commentary from leading photography historians. The name Walker Evans conjures images of the American everyman. Whether it's his iconic contributions to James Agee's depressionera classic book, *Let Us Now Praise Famous Men*, his architectural explorations of antebellum plantations, or his subway series, taken with a camera hidden in his coat, Evans's accessible and eloquent photographs speak to us all. This comprehensive book traces the entire arc of Evans's remarkable career, from the 1930s to the 1970s. The illustrations in the book range from his earliest images taken with a vest pocket camera to his final photos using the then new SX-70 because his regular equipment had become too heavy to carry around. The book includes commentary from three of Evans's longtime friends, photographers John T. Hill and Jerry Thompson and professor emeritus (Yale University) Alan Trachtenberg. Their insight and first-hand experience give depth to their critical writings on Evans's work. In addition to offering a broad perspective on Evans's work, the book also clarifies the photographer's "anti-art" philosophy. Eschewing aesthetic hyperbole, Evans wanted his pictures to resonate with a wide audience. At the same time, his natural curiosity made him one of the most inventive photographers of all time. What these photographs and writings attest to is a huge and timeless talent, which came not from a camera, but from Evans's uniquely hungry eye.

Neuroengineering Daniel J. DiLorenzo 2007-12-07 Based on a foundation of science and empirical observation, engineering research and design has brought science fiction into science fact. The convergence of neuroscience and technology is facilitating the development of therapies that not long ago would have seemed unimaginable, if not impossible. With contributions from pioneers in industry, academia, and clinical medicine, Neuroengineering

provides an understanding of the history, physiology and the most promising engineering technologies. The book presents clinical applications of neuromodulation and a detailed review of the science and mechanisms of action underlying deep brain stimulation. Contributions include discussions of seizure control, clinical, surgical, and technological aspects of responsive neurostimulation, and a thorough review of spinal cord stimulation for pain control. The book highlights promising technologies and applications for neural augmentation, brain and computer interfaces, and motor prostheses. It concludes with coverage of the science underlying current neurostimulation techniques and new paradigm-shifting neuromodulation technologies. We are on the cusp of a technological revolution that promises to have more of an impact on human health, disease, and quality of life than any other in recent history. Its impact on medicine and society promises to be as dramatic as that of the development of antibiotics. The transition of neural engineering from basic research to intense commercialization and widespread clinical application and acceptance is just around the corner. Providing in-depth coverage of cutting-edge developments in technology and clinical practice, the book presents detailed descriptions of technologies, science, and clinical results that build a foundation for the future.

Securing Outer Space Natalie Bormann 2009-01-30 The challenges that space poses for political theory are profound. Yet until now, the exploration and utilization of space has generally reflected – but not challenged – the political patterns and impulses which characterized twentieth-century politics and International Relations. This edited volume analyses a number of controversial policies, and contentious strategies which have promoted space activities under the rubric of exploration and innovation, militarization and weaponization, colonization and commercialization. It places these policies and strategies in broader theoretical perspective in two key ways. Firstly, it engages in a reading of the discourses of space activities: exposing their meaning-producing practices; uncovering the narratives which convey certain space strategies as desirable, inevitable and seamless. Secondly, the essays suggest ways of understanding, and critically engaging with, the effects of particular space policies. The essays here seek to ‘bring back space’ into the realm of International Relations discourse, from which it has been largely removed, marginalized and silenced. The various chapters do this by highlighting how activities in outer space are always connected to earth-bound practices and performances of the every day. Securing Outer Space will be of great interest to students of space power, critical security studies and IR theory.
